

JST's activities to contribute to knowledge infrastructure in Japan.

Mr. Katsuji Matsumura
Japan Science and Technology Agency (JST)

Japan Science and Technology Agency (hereinafter, JST) is in the process of building a new infrastructure suitable for information metric analysis by means of identifying accumulated information assets and linking them on a standardized manner such as RDF (Resource Description Framework).

JST aims at contributing to support finding new ideas and collecting multidisciplinary information in the stages of seeking new challenges and academia-industry cooperation, and bringing innovation in Japan by disseminating high-quality scientific and technological information and circulating knowledge through the infrastructure.

I would like to talk about some of our activities related the infrastructure in this session.
